                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cross-references: UNIPARC:UP1000016EA41; EMBL:X05692; NID:g40350; PIDN:CAA29174.1; PID:Comment: This protein is toxic to many lepidopteran larvae.
Superfamily: Parasporal crystal protein
Keywords: delta-endotoxin

parasporal crystal protein cry3Bal - Bacillus thuringiensis (fragment)
NyAlternate names: coleopteran-active parasporal crystal protein; delta-endotoxin
C;Species: Bacillus thuringiensis
C;Date: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 05-Oct-2004
C;Accession: $10228
R;Sick, A.; Gaertner, F.; Wong, A.
Nuclect Acids Res. 18, 1305, 1990
A;Title: Nucleotide sequence of a coleopteran-active toxin gene from a new isolate of Ba
A;Reference number: $10228, MUID:90206811; PMID:2320431
A;Reference number: $10228
A;Retus: translation not shown
A;Redues: cry1118
C;Genetics:
A;Gene: cry111B
C;Reywords: delta-endotoxin; toxin

Paragoral crystal protein cry8Cal - Bacillus thuringlensis
NyAlternate names: parasporal crystal protein cryIII
NyAlternate names: parasporal crystal protein cryIII
C;Species Bacillus thuringlensis
C;Date: 12-Aug-1996 #sequence\_revision 12-Aug-1996 #text\_change 05-Oct-2004
C;Accession: 140589
R;Sato, R.; Takeuchi, K.; Ogiwara, K.; Minami, M.; Kaji, Y.; Suzuki, N.; Hori, H.; Asano
Curr. Microbiol. 28, 15-19, 1994
A;Title: Cloning, heterologous expression, and localization of a novel crystal protein g
A;Reference number: 140589; MUID:94100786; PMID:7764305

8 8 8

A; Accession: 140589

A;Status: preliminary; translated from GB/EMBL/DDBJ A;Molecule type: DNA A;Residues: 1-1160 <RES>

protein genes of Bacillus thuringiensis var. israelensis.";
Agric. Biol. Chem. 52:873-878(1988).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-AUG-1990 (Rel. 15, Created)
01-AUG-1990 (Rel. 15, Last sequence update)
01-AUG-1990 (Rel. 15, Last sequence update)
13.SEP-2005 (Rel. 48, Last annotation update)
Pesticidial crystal protein cry4Aa (Insecticidal delta-endotoxin CryIVA(a)) (Crystaline entomocidal protoxin) (135 kDa crystal protein).
Name-cry4Aa; Synonyms-cryIVA(a), isrH4;
Bacillus thuringlensis subsp. israelensis.
Plasmid 72 KD.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bacillus

-!-FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
-!-FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
-!-FUNCTION: Promotes colloidosmotic lysis by binding scarabaeid beetles.
-!- DEVELOPMENTAL STACE: The crystal protein is produced during
sporulation and is accumulated both as an inclusion and as part of
the spore cost.

A novel class of mosquitocidal delta-endotcoxin, Cry198, encoded by a Bacillus thurings of ensist source gene.";

Syst. Appl. Microbiol. 21:179-184 (1998).

-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of mosquitos.

-!- DEVELOPMENTAL STARE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      쉱
                                                                                                                                                                                   This sequence represents an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide realstance, specifically bacteria and plants. These organisms are useful for sensiting altered or improved delta-endotoxin or delta-endotoxin-associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin-associated proteins or organisms.
                                                                                                                              New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

This sequence represents an isolated delta-endotoxin. Some of the delta-
endotoxin coding sequences of the invention have alternative start
codons, producing more than one protein from a single open reading frame.
The nucleic acid sequences of the invention are useful in DNA constructs
or expression cassettes for transformation and expression in plants and
bacteria. The nucleic acids and corresponding polypeptides are useful for
Killing lepidoperan or coleoperan pests. Compositions containing the
CK climing lepidoperan of organisms with pesticide resistance,
useful for the production of organisms with pesticide resistance,
specifically bacteria and plants. These organisms are useful for
generating altered or improved delta-endotoxin or delta-endotoxin.

Sesociated proteins that have pesticidal activity, or for detecting the
presence of delta-endotoxin or delta-endotoxin-associated proteins or
nucleic acids in products or organisms.
                                                                                                                                                                                                                                                                                                                                                          isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CTAATCACTGTCTTTTGGCCCGCGGGAGAACAAGACAAAACAGTATGGACACAATTTATT 390

                                                                                                                                                                                                                                                                                          This sequence represents an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for senciating altered or improved delta-endotoxin or delta-endotoxin-sasociated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin-associated proteins or nucleic acids in products or organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100
                                                                                                                                                                                                                           isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   237
